

SHOWING THE WAY VISUALIZATION CENTER

By Mr. Norman L. Murray Jr.

Director, C4ISR Visualization Center

PENTAGON — The C4ISR Visualization Center provides a Washington, D.C., location where Air Force and DoD organizations can demonstrate and display their products and capabilities to senior military and civilian leaders.

Its mission is to provide a Pentagon portal into Air Force and Joint training events, experiments, wargames, real-world operations, and to facilitate demonstrations of new and emerging technologies.

It also provides government, industry and academia with a venue to showcase a variety of technologies throughout the development cycle.

The CVC supports Air Force initiatives by developing conceptual views, video presentations and animations, and it provides a robust video teleconference and demonstration capability used by senior leadership.

In May, the CVC demonstrated the Distributed Mission Operations. This event was a “distributed event” between four sites facilitated by use of the Distributed Mission Operations Center’s mission brief/debrief system. The distributed locations were the CVC, the DMOC located at Kirtland AFB, N.M., Langley AFB, Va., and Nellis AFB, Nev.

This event showcased Air Combat Command’s Virtual Flag 04-3 training exercise. It allowed participants to brief the Chief and to demonstrate to him the advances being made in the DMO program.

In addition, a DVD of the event captured the Chief’s com-

ments that was shared throughout the Air Force.

In August, the CVC provided a Pentagon portal into the Joint Expeditionary Force Experiment 2004, an Air Force-sponsored, ACC executed experiment that combined live-fly,

live-play, ground and naval forces, simulations, and technology insertion into a near-seamless warfighting environment. In partnership with the Air Force Experimentation Office, daily demonstrations and briefings of key JEFX 04 initiatives were presented to senior DoD and USAF leaders unable to travel to Nellis, the JEFX 04 Headquarters and main activity site. Additionally, three VTC’s were conducted between the JEFX 04 Headquarters and the CVC in support of VIP Day, Congressional Staffer Day, and Media Day. The JEFX 04 demonstrations in the CVC were attended by 154 DoD and USAF personnel, which included 20 general officer/senior executive service members, 11 Congressional staffers, and 13 members of the media.

In the future, the CVC plans expanded involvement with both the Virtual Flag and JEFX programs and has several events scheduled for 2005 involving units throughout the Air Force.

BUILDING THE FUTURE

Air Force Modeling & Simulation Conference March 1-3, Orlando, Fla.

Keynote speaker: Lt. Gen. Tom Hobbins
Deputy Chief of Staff, Warfighting Integration

Annual M&S award winners will be recognized

To register go to www2.afams.af.mil and click on the AF M&S Conference logo

To ensure you’re ready for the conference, sign up for the “Vectored Thrusts

Learning Environment” found at the AFAMS Web site. There is an M&S introductory course as well.
